无线网络架构

SMB市场

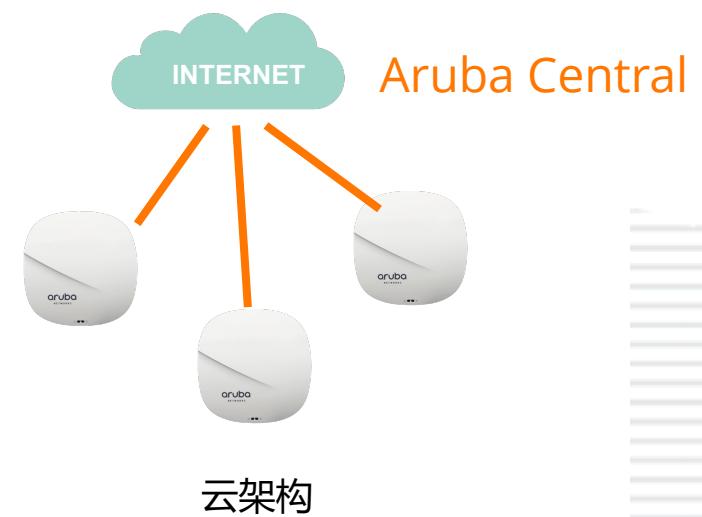

独立工作 (Standalone)

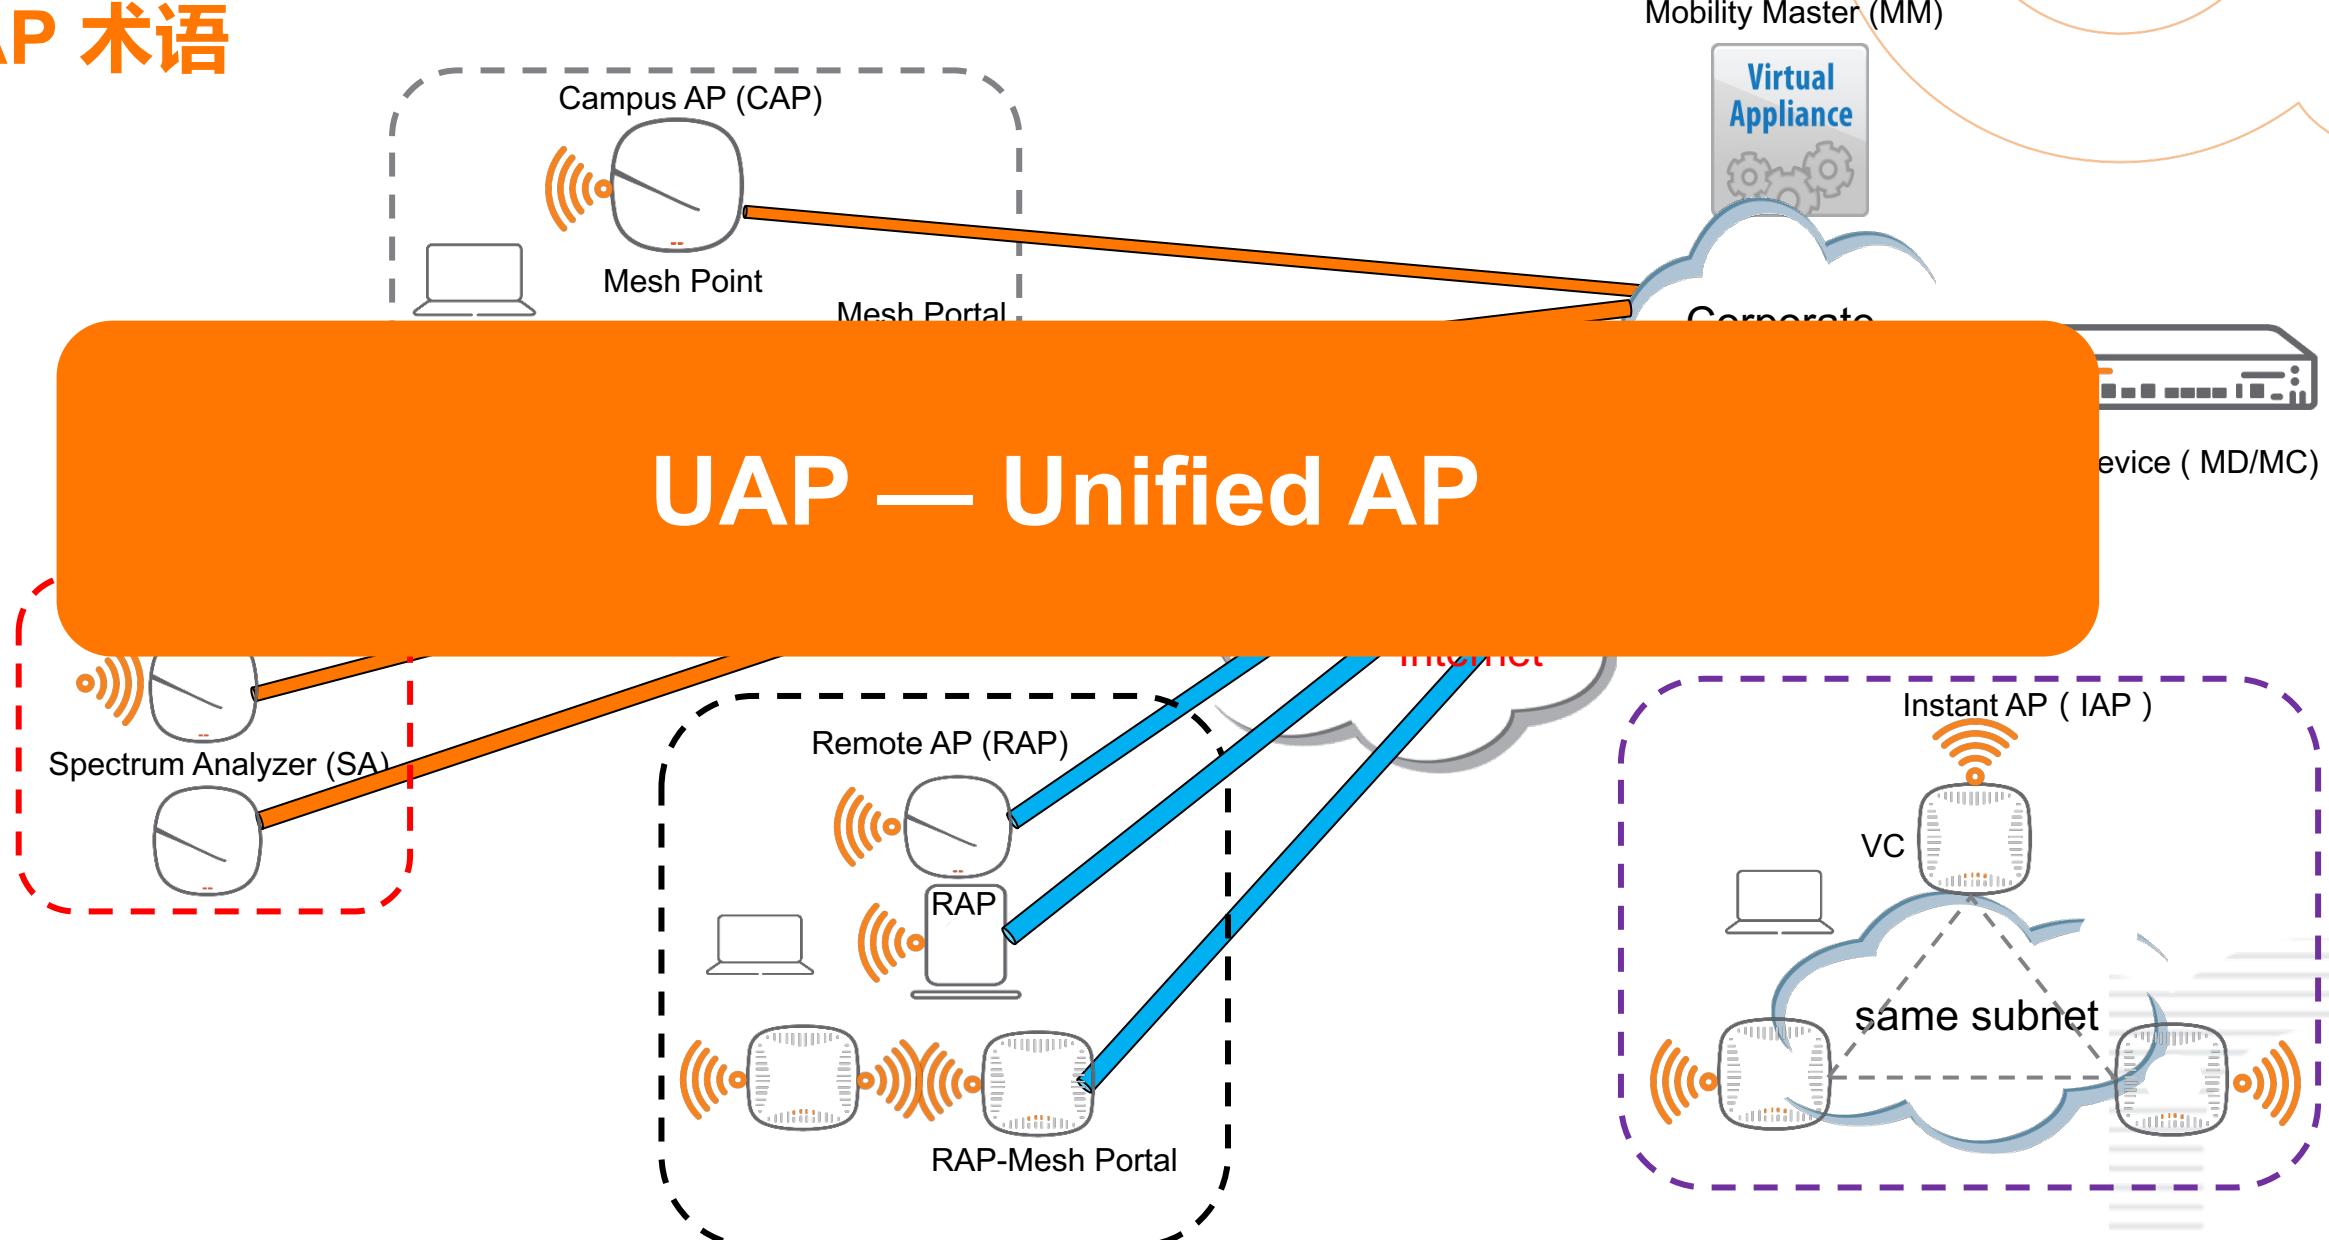

企业市场

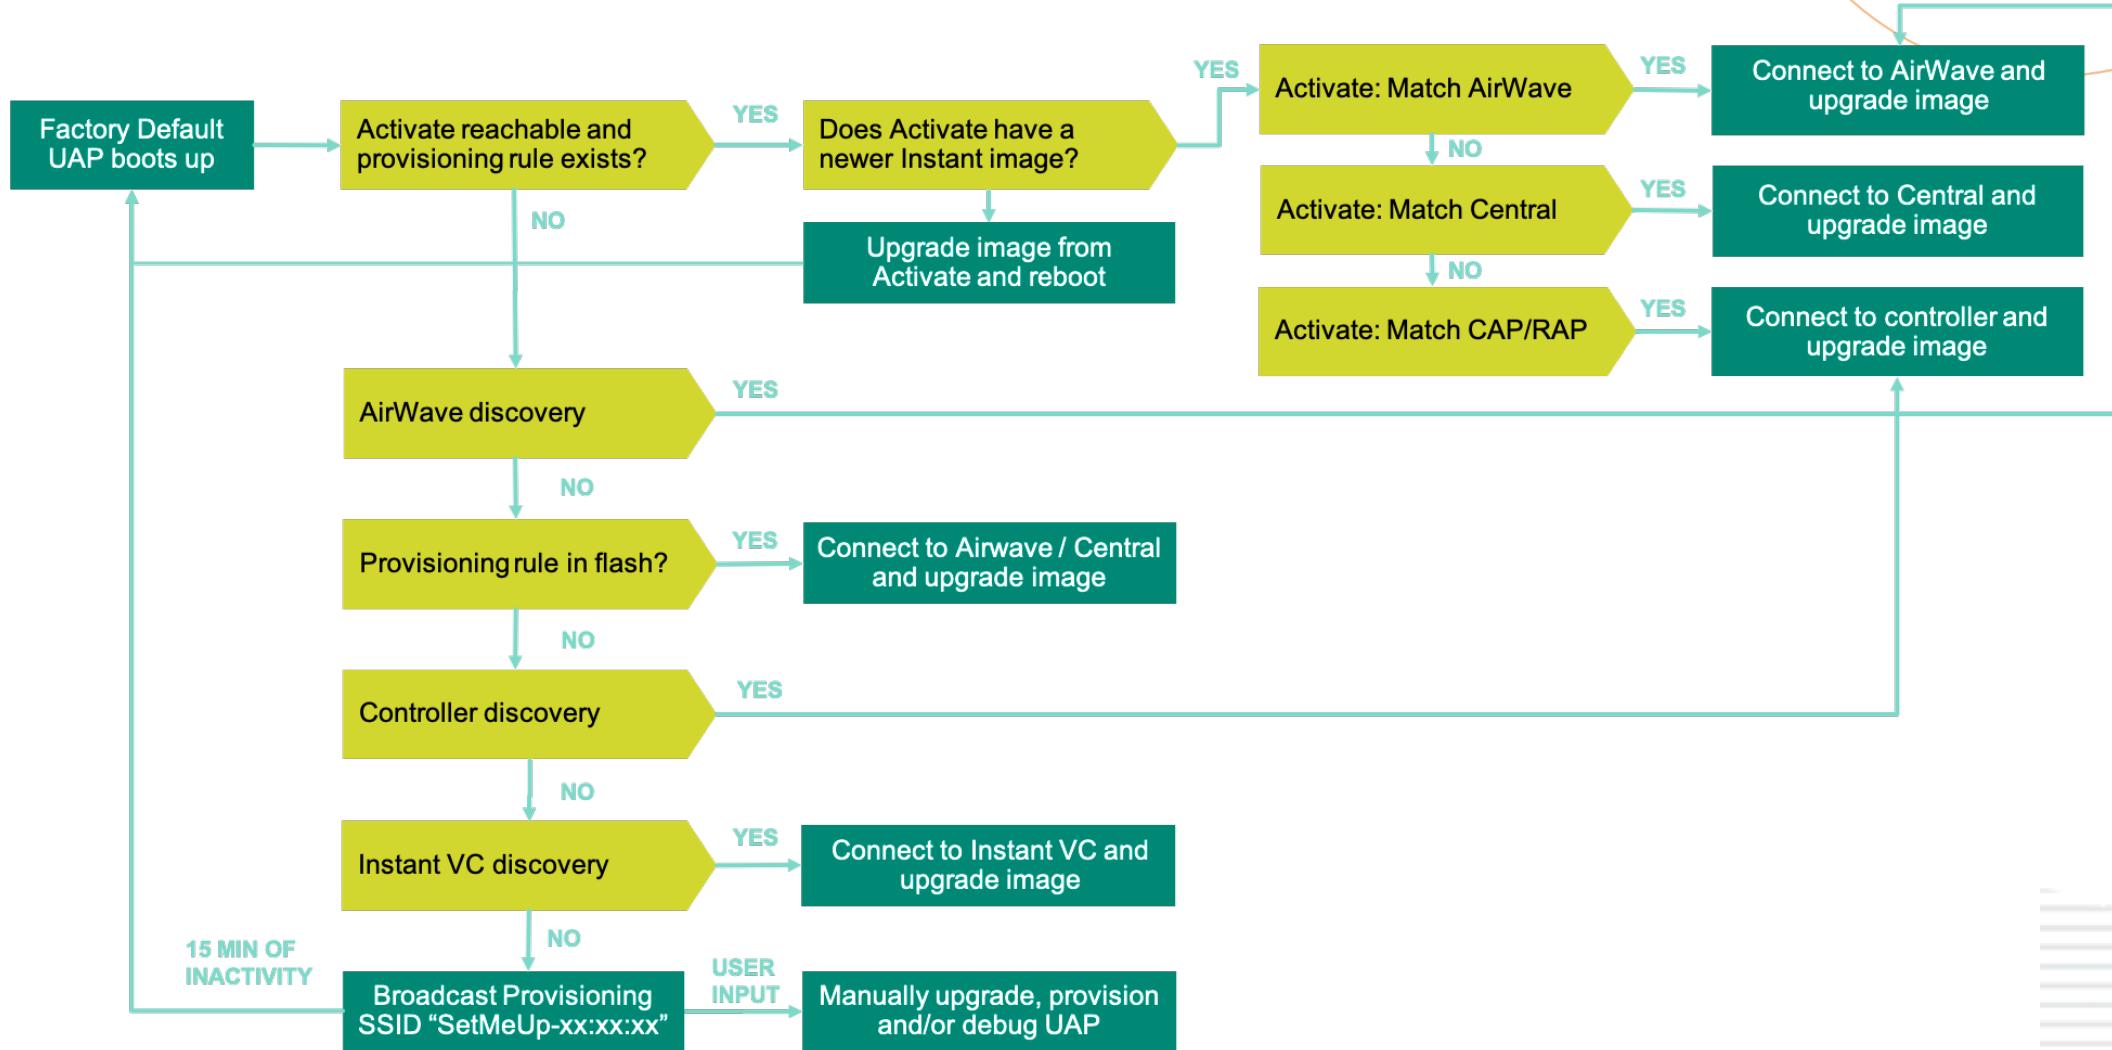

控制器架构

AP 术语

UAP Discovery Process

IAP Clusters

Radio Features

- Adaptive Radio Management
- Client Match
- Spectrum analysis

Firewall

- Stateful firewall / User based roles / WLAN based rules
- Extended actions / Voice ACLs / AppRF (Layer 7)

Services

- WLAN 802.1X, MAC auth, captive portal
- OS fingerprinting
- Cloud based content filtering (OpenDNS, Brightcloud)
- Webcc
- IoT
- WiFi Calling

IDS / IPS

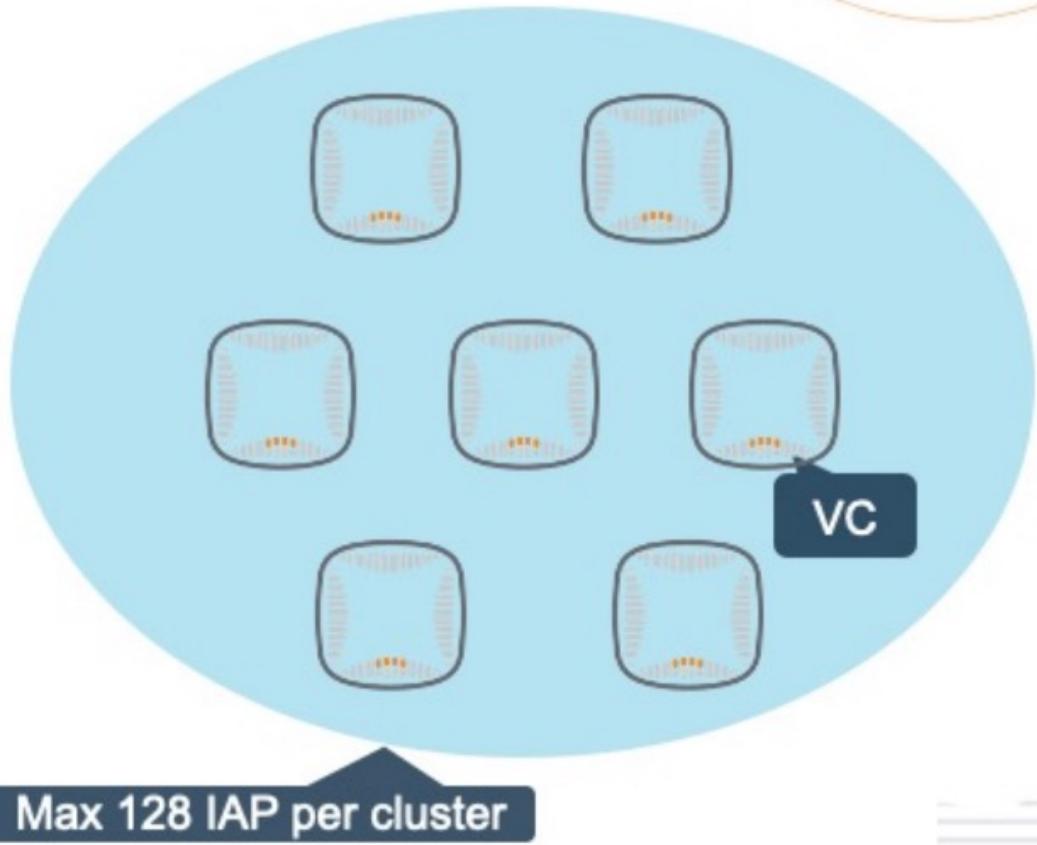

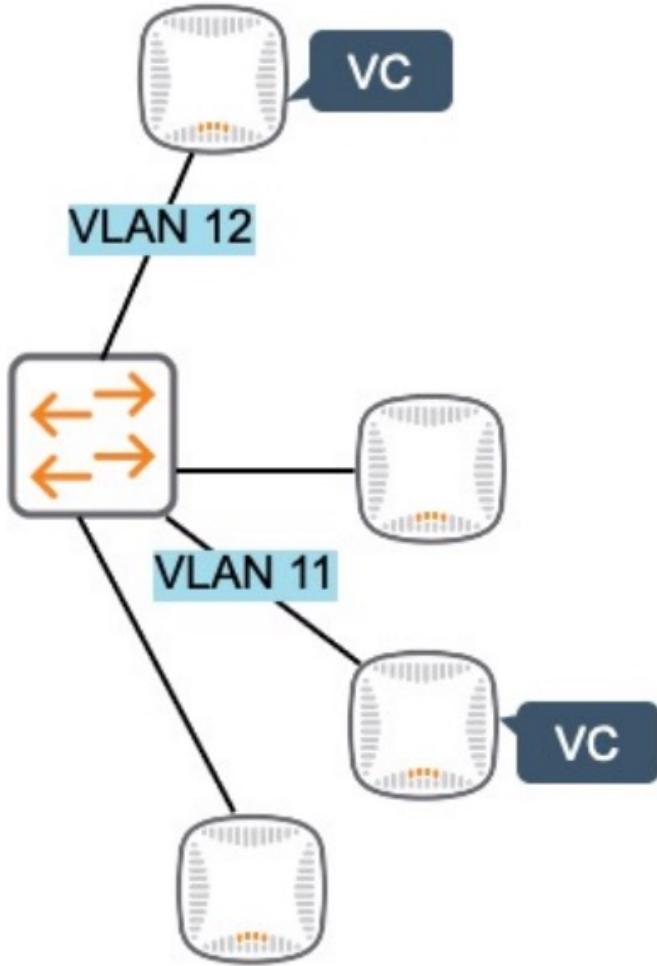

- Rogue AP detection and classification

Management

- AirWave integration
- Aruba Central cloud-based management
- Activate automates deployments

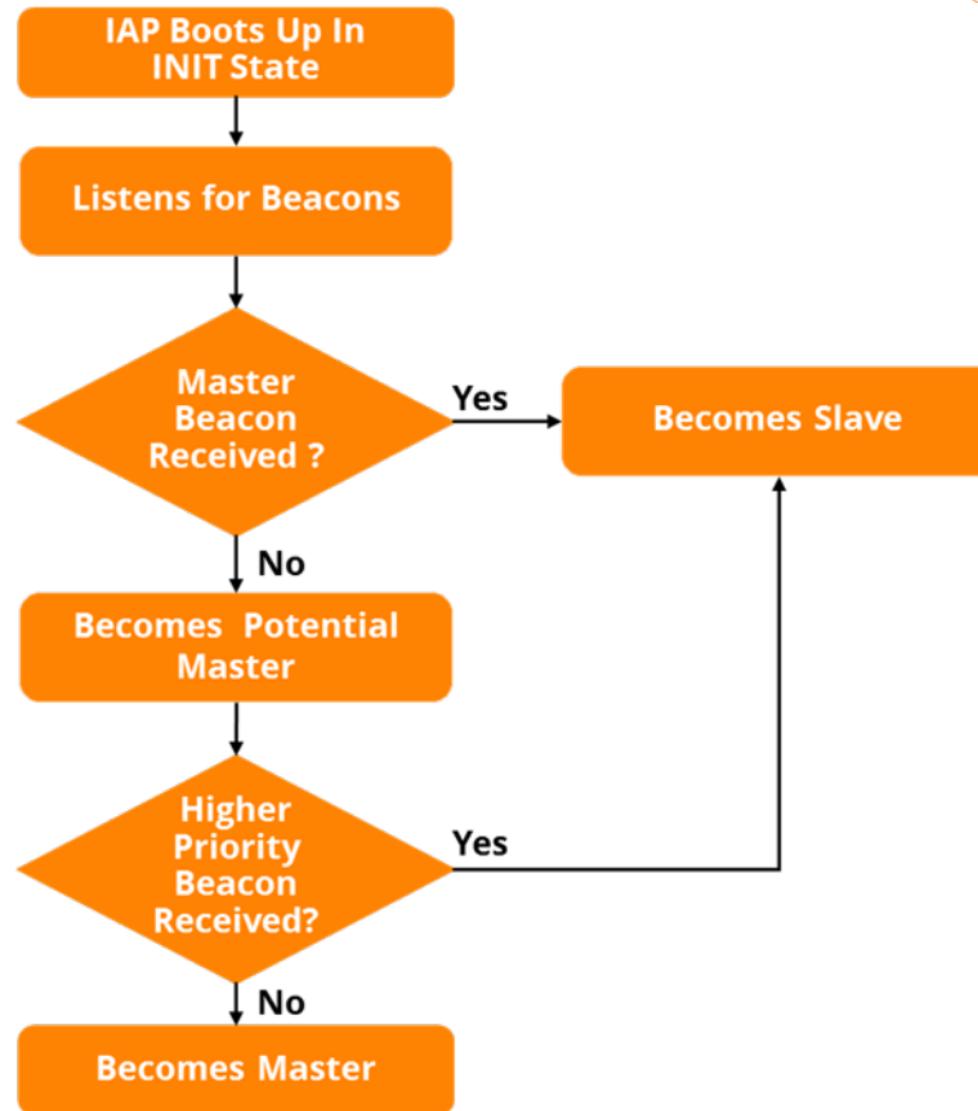

Aruba Instant VC Cluster

Master Election Process

IAPs are capable of operation in one of 4 possible states:

- Initial
- Slave
- Potential Master
- Master

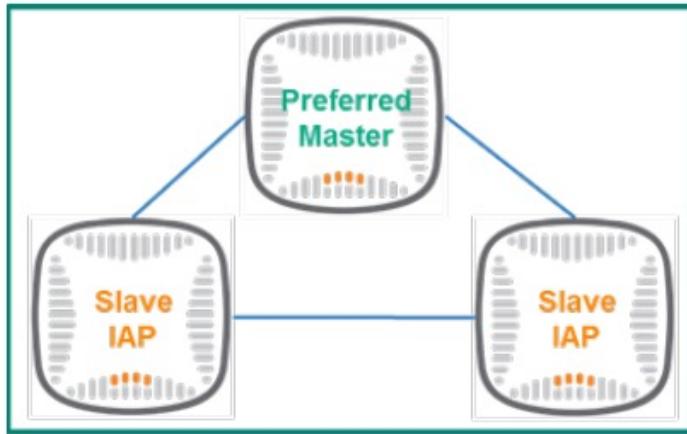

Conductor Election Protocol

Election beacons
are broadcast and
unicast L2 frames

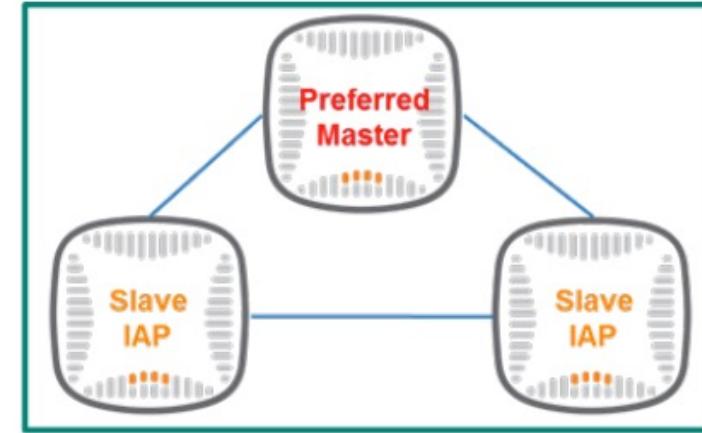

An IAP is elected as a conductor by

- Enforced
- Random Intervals
- Versus Policy

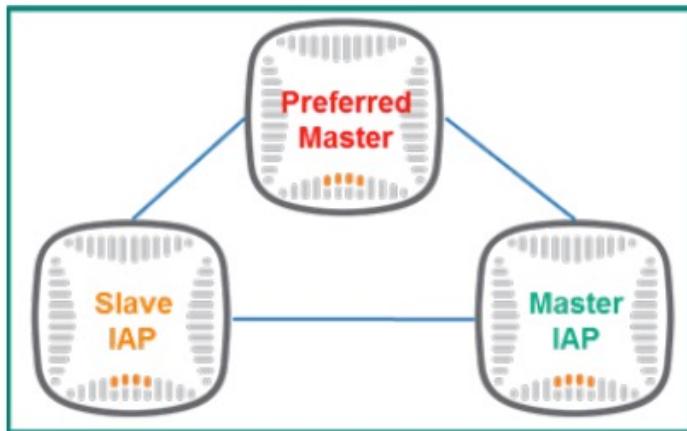

Preferred Master

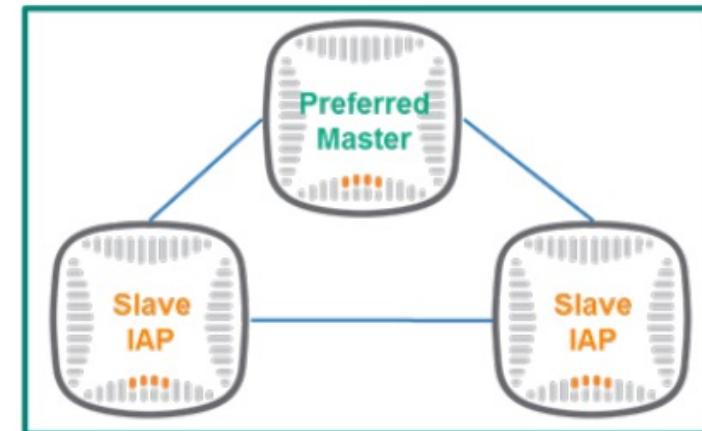

Preferred Master Designated

Preferred Master Fails

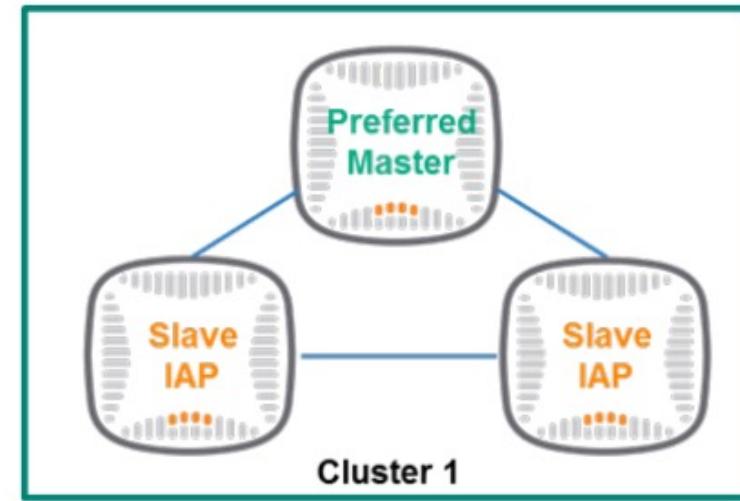

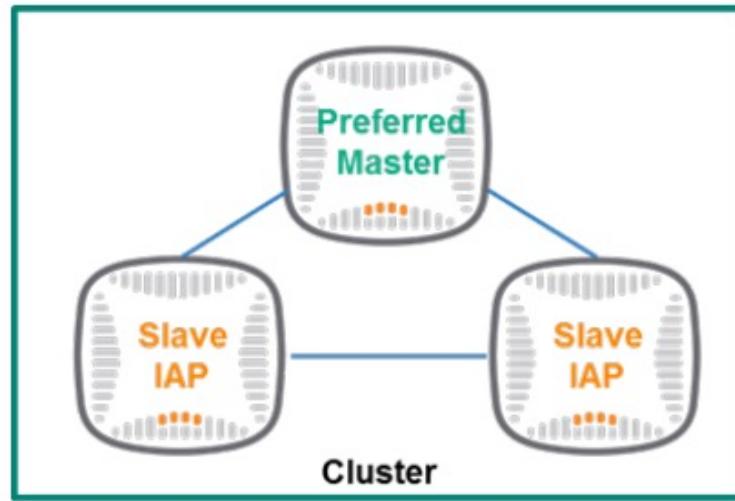

New Master Elected

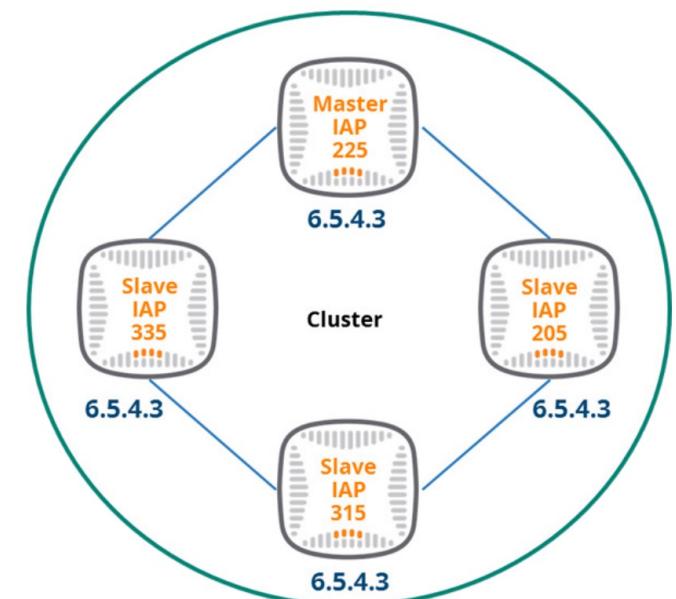

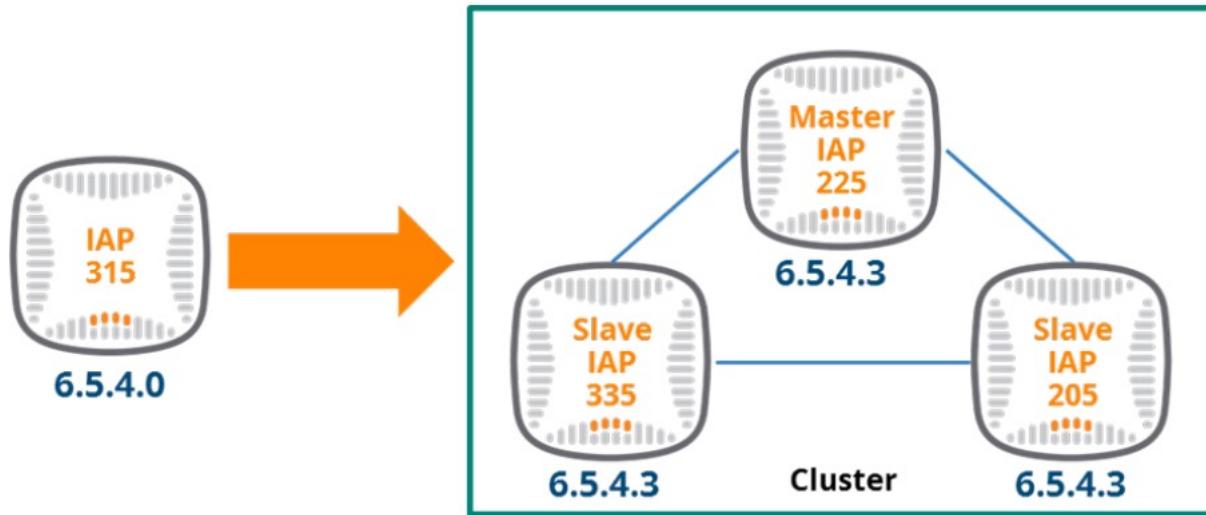

Preferred Master Restored

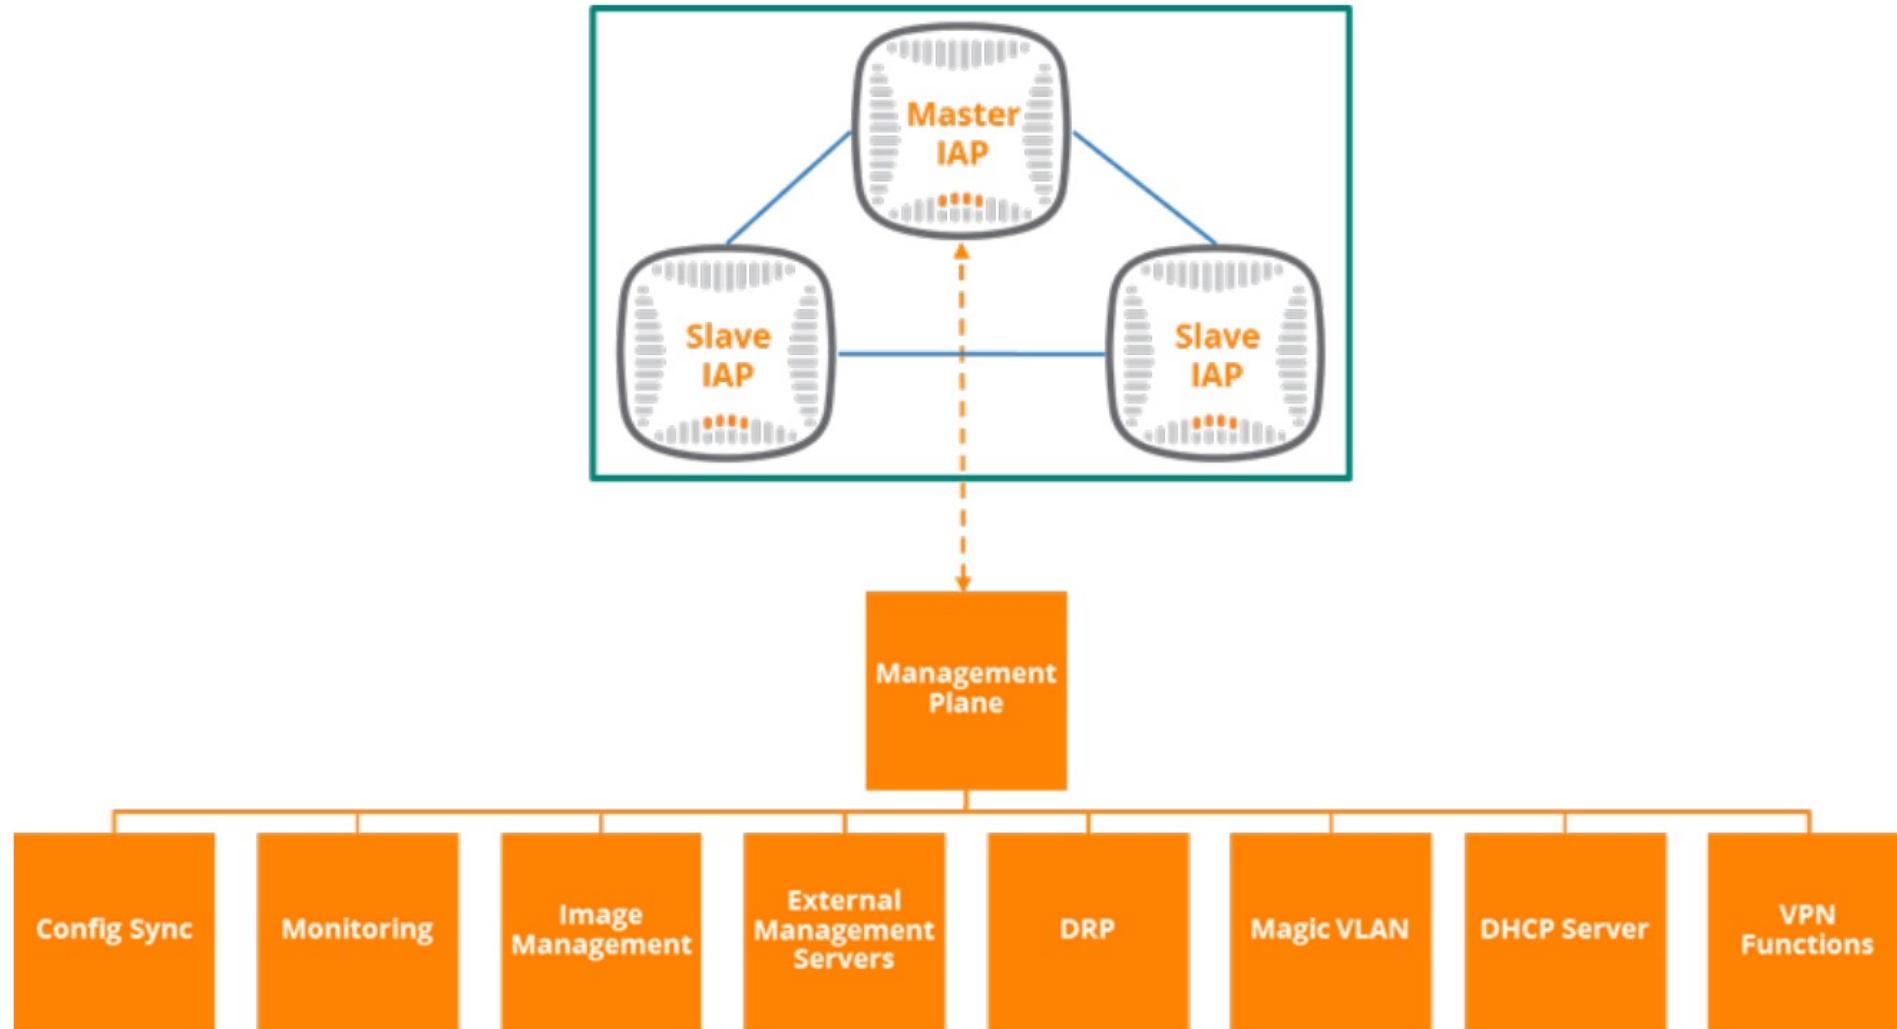

Multiple Preferred Masters

VLAN Assignment

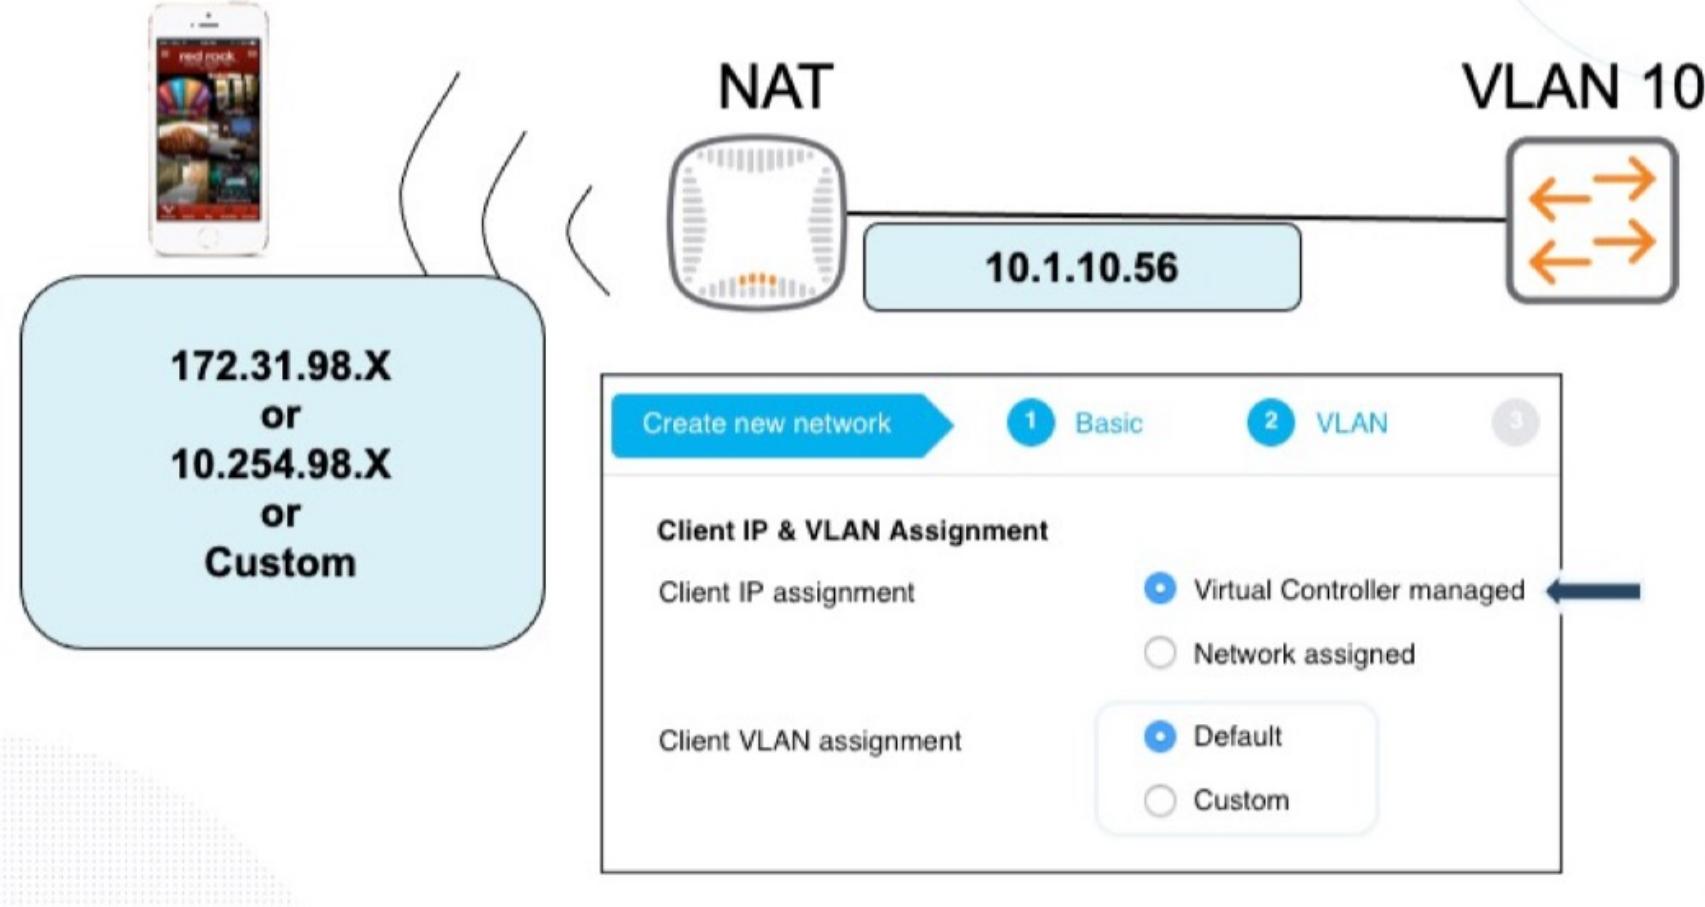

网络指定：（跟 uplink 网络相关）

- default : 与uplink一致
- static : 指定vlan ID
- dynamic : 根据属性动态下发VLAN

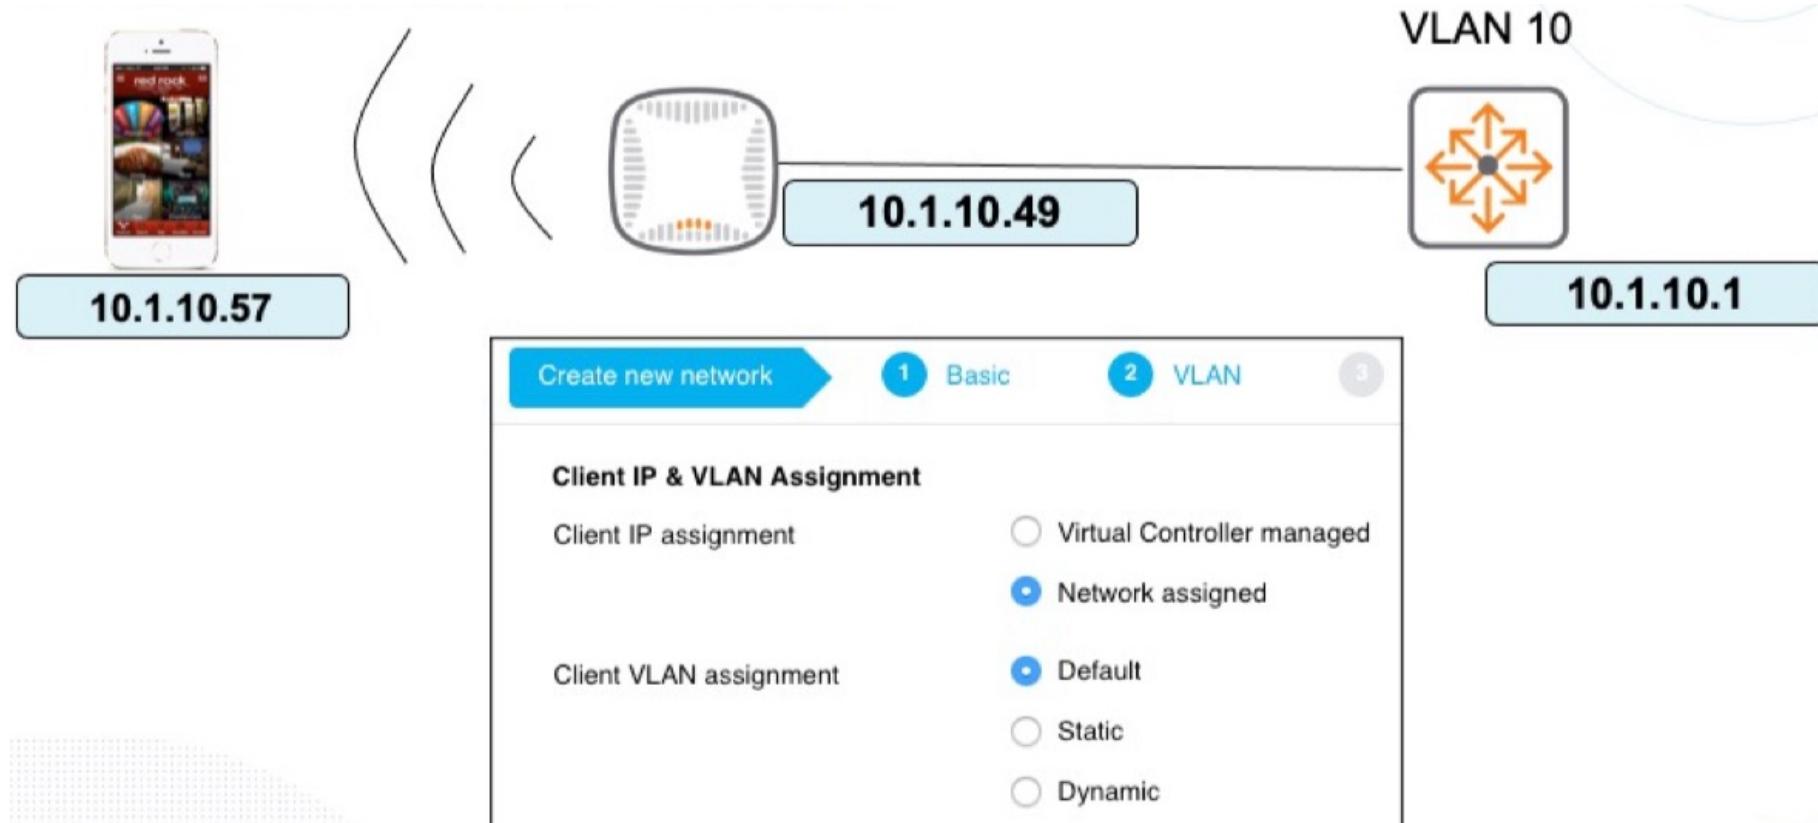

虚拟控制器管理：

- default : 172.31.98.x
- Custom : 自定义，在VC配置dhcp

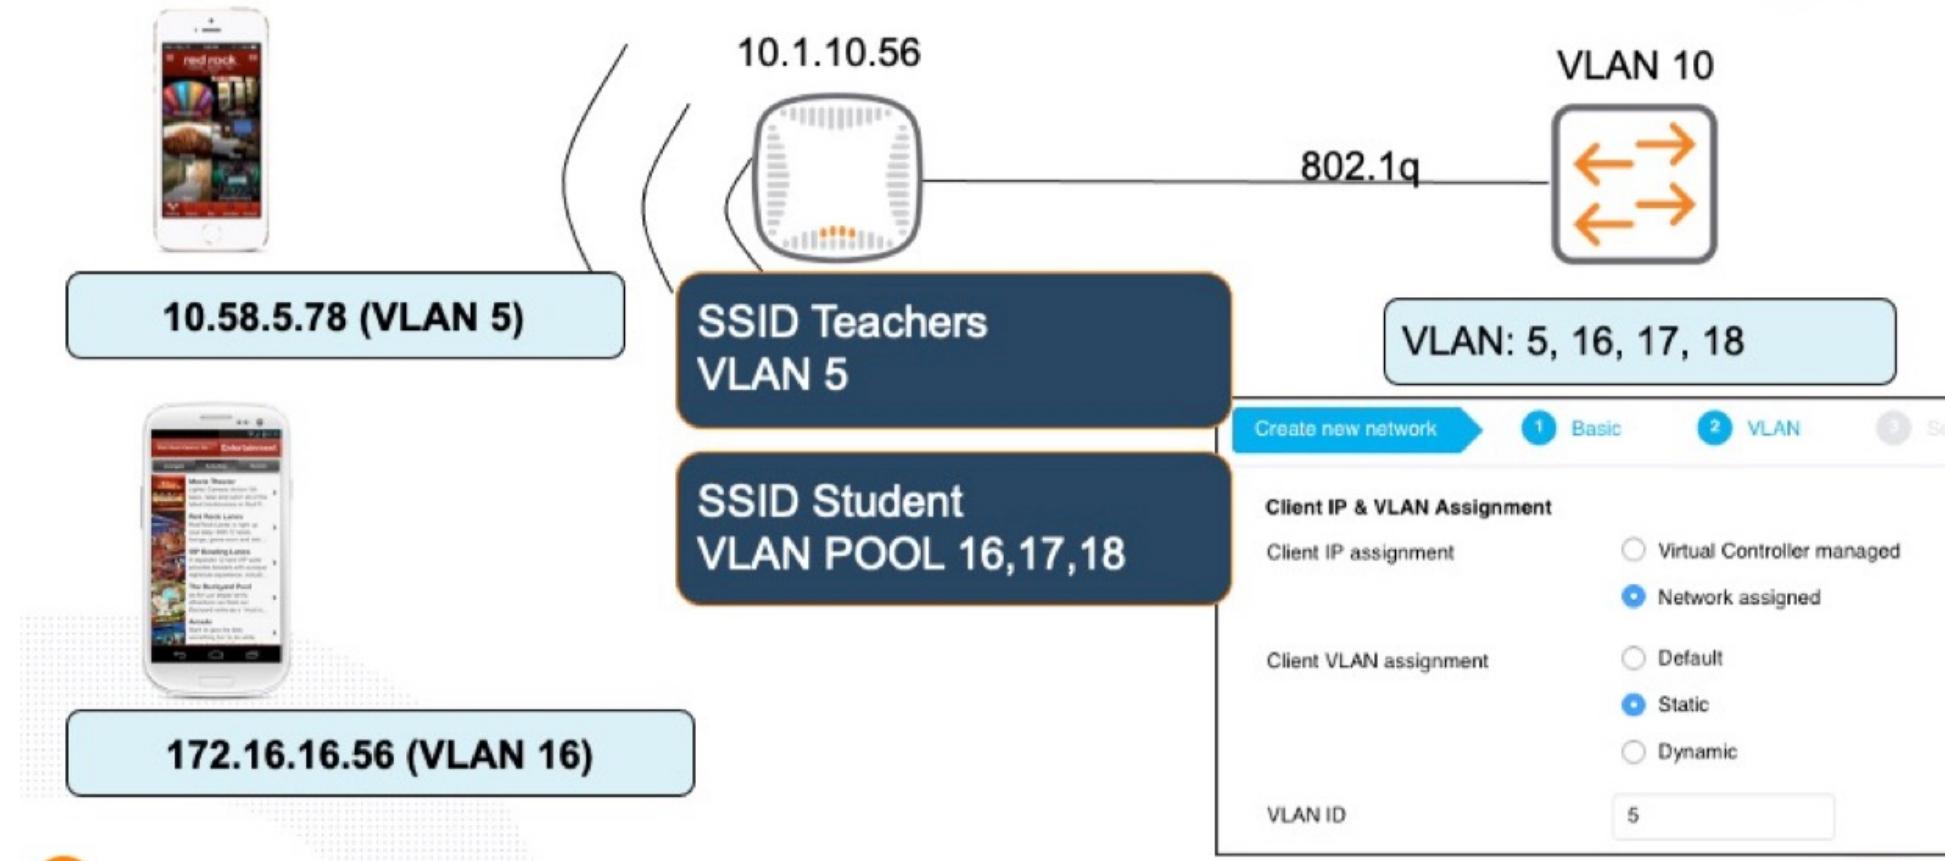

VC managed

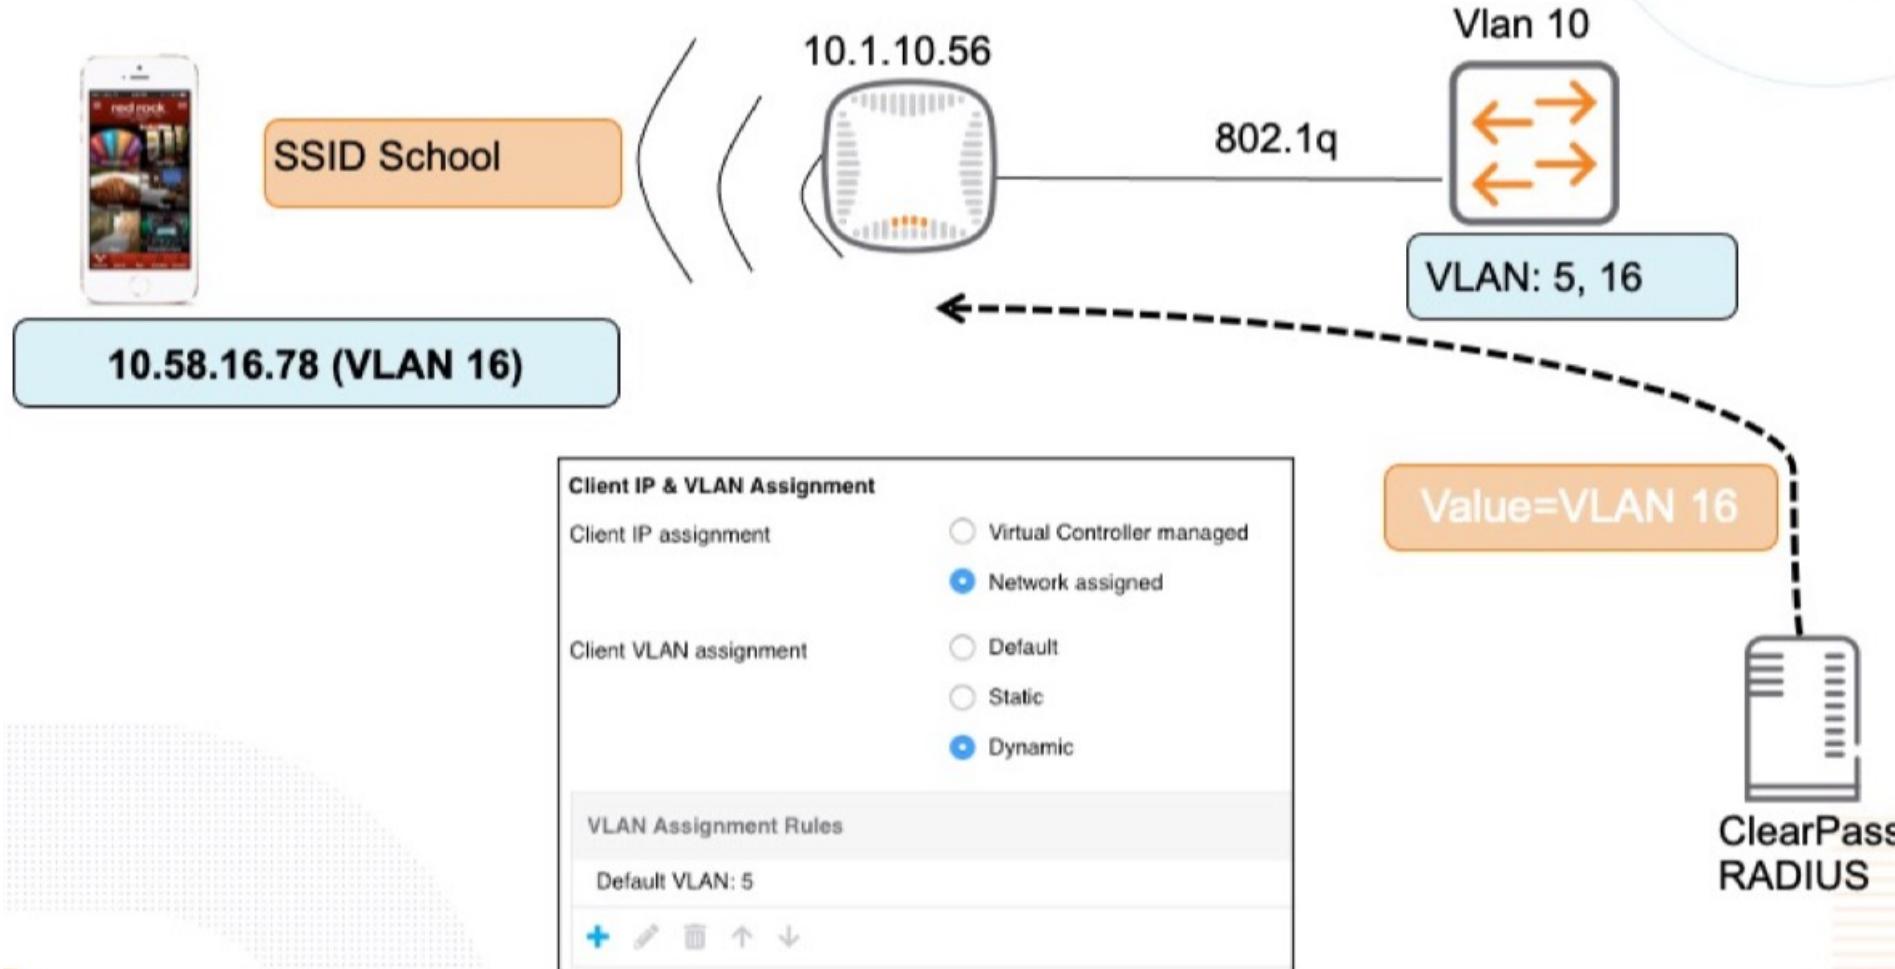

Network assigned

Network Assigned -Static

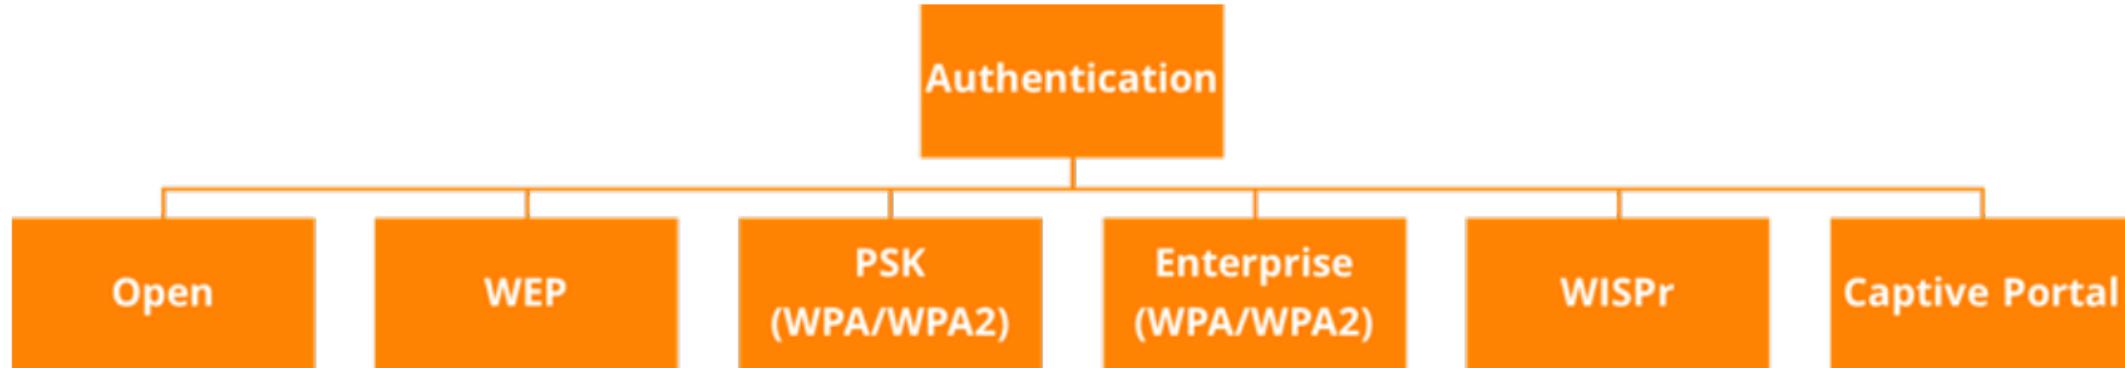

Network Assigned -Dynamic

IAP Forwarding Modes

External DHCP	Local external DHCP Server and Default Gateway(DG). Not used with VPN
Local	VC is the DHCP Server and DG
Local L2	VC is DHCP Server and DG is outside the IAP
Local L3	VC is DHCP Server and DG assigns IP address from local subnet
Distributed L2	VC is DHCP Server and DG is corporate network
Distributed L3	VC is DHCP Server and the VC is the DG with a Corporate subnet. Traffic is routed
Centralized L2	DG is Controller or a router in the Corp and DHCP server is also in the Corp
Centralized L3	DHCP server is corporate network and VC is DG. Traffic is routed

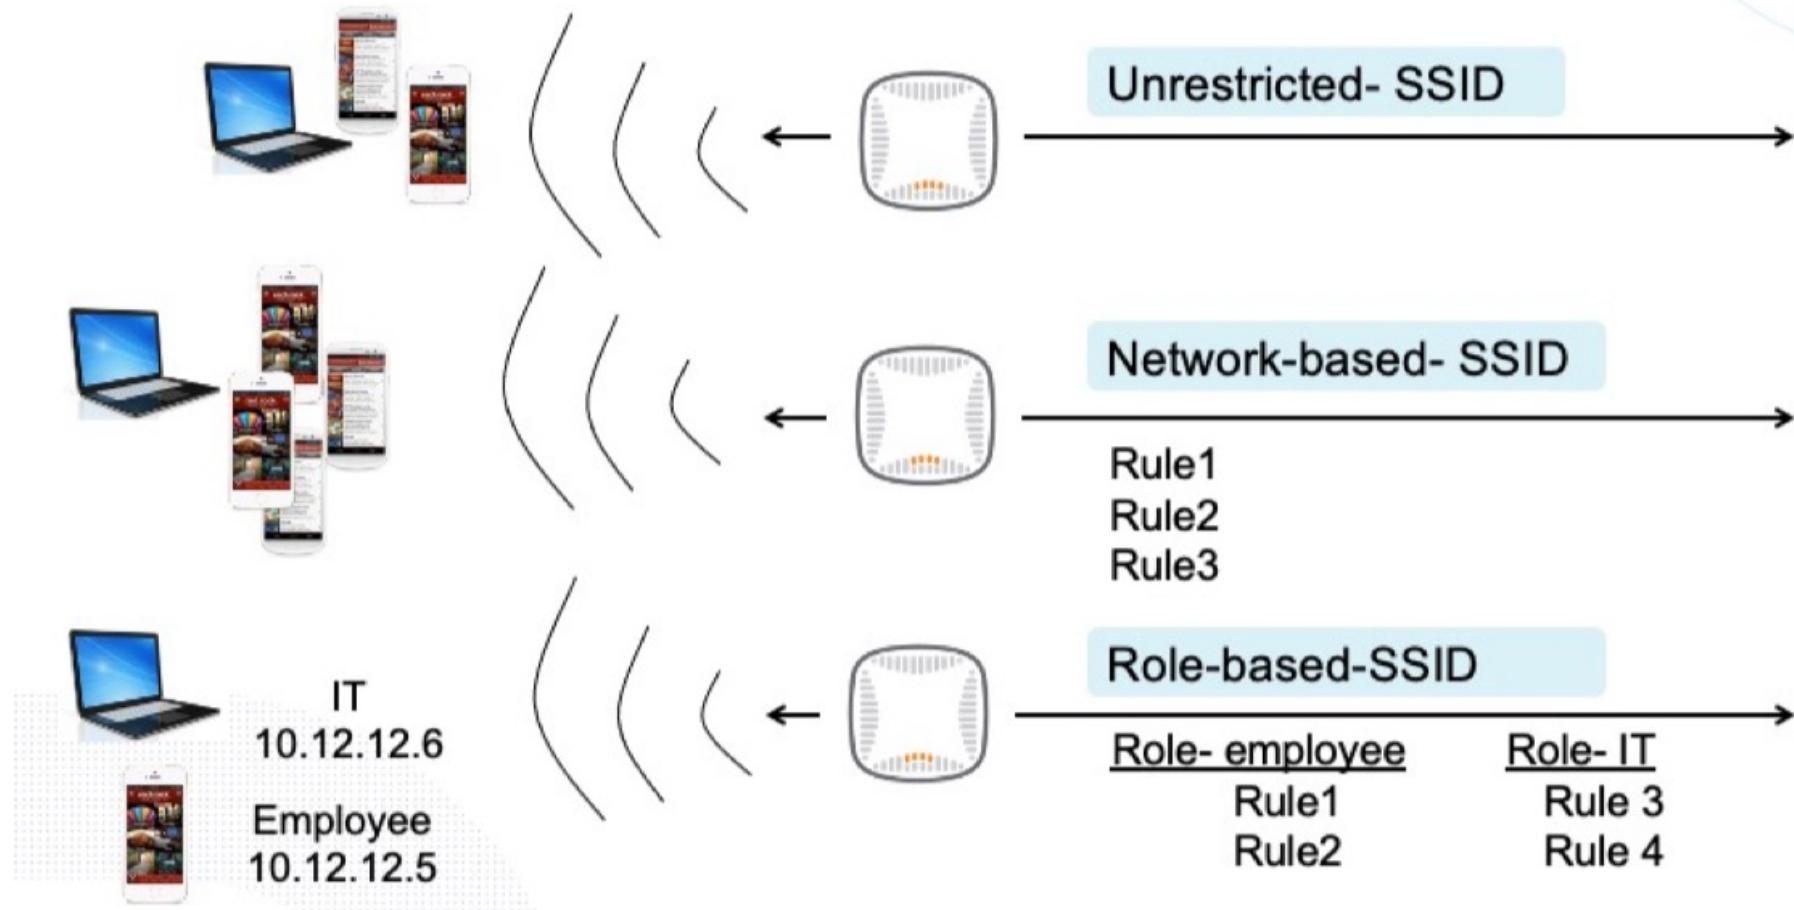

Security — Authentication

Authentication Type	Employee	Guest
Open	Not Recommended	Recommended with a higher-level authentication method
WEP	Not Recommended	Not Recommended
PSK	Recommended for devices that do not support stronger authentication	Can be used but the PSK key should be rotated in a regular basis
802.1X	Recommended	N/A
WISPr	N/A	Recommended in public places such as airports
Captive Portal	N/A	Recommended

Access Rules-Role

Rule

New rule

Rule type	Service	Action	Destination
Access control	Network	any	Allow
✓ Access control	✓ any	✓ Allow	to all destinations
VLAN assignment	CUSTOM	✓ Deny	✓ to all destinations
Captive portal	adp	Deny	to a particular server
CALEA	bootp	Source-NAT	except to a particular server
Bandwidth Contract	cfgm-tcp	Destination-NAT	to a network
Redirect Page URL	cups		except to a network
Redirect Blocked HTTPS	dhcp		to domain name
	dhcp-v6		to AP IP
	dns		to AP network
	esp		to master IP
	ftp		
	gre		
	h323-tcp		
	h323-udp		
	http-proxy2		
	http-proxy3		
	http		
	https		
	icmp		
	icmp-v6

Backup and Restore

The screenshot shows a network management interface with a sidebar menu and a main configuration view.

Left Sidebar:

- Dashboard
- Overview
- Networks
- Access Points
- Clients
- Mesh Devices
- Configuration
- Maintenance** (highlighted with a blue arrow)
- About
- Firmware
- Configuration** (highlighted with a blue arrow)
- Certificates
- Reboot

Main View:

Current Configuration:

```
version 8.8.0.0-8.8.0
virtual-controller-country US
virtual-controller-key cc6e6a6501
name VC-T14-Venu
virtual-controller-ip 10.49.140.100
terminal-access
clock timezone none 00 00
rf-band all
allow-new-ap
allowed-ap 20:4c:03:3d:4c:04
allowed-ap 20:4c:03:3d:7c:88
routing-profile
route 10.253.0.0 255.255.0.0 1
arm
```

Modal Window (Confirm Clear Configuration):

Doing a complete configuration clear (equivalent to a factory reset) may cause connection issues with mesh deployment.

Remove all configurations including per-AP settings and certificates

Buttons: Cancel, Clear Configuration

Bottom Buttons:

- Start Over ?
- Clear Configuration (highlighted with a red box)
- Backup Configuration
- Restore Configuration

Diagram Labels:

- A red arrow points from the "Clear Configuration" button to a laptop icon labeled "backup.cfg".
- A red box highlights the "Clear Configuration" button in the bottom menu.

Reset

1. Power off IAP

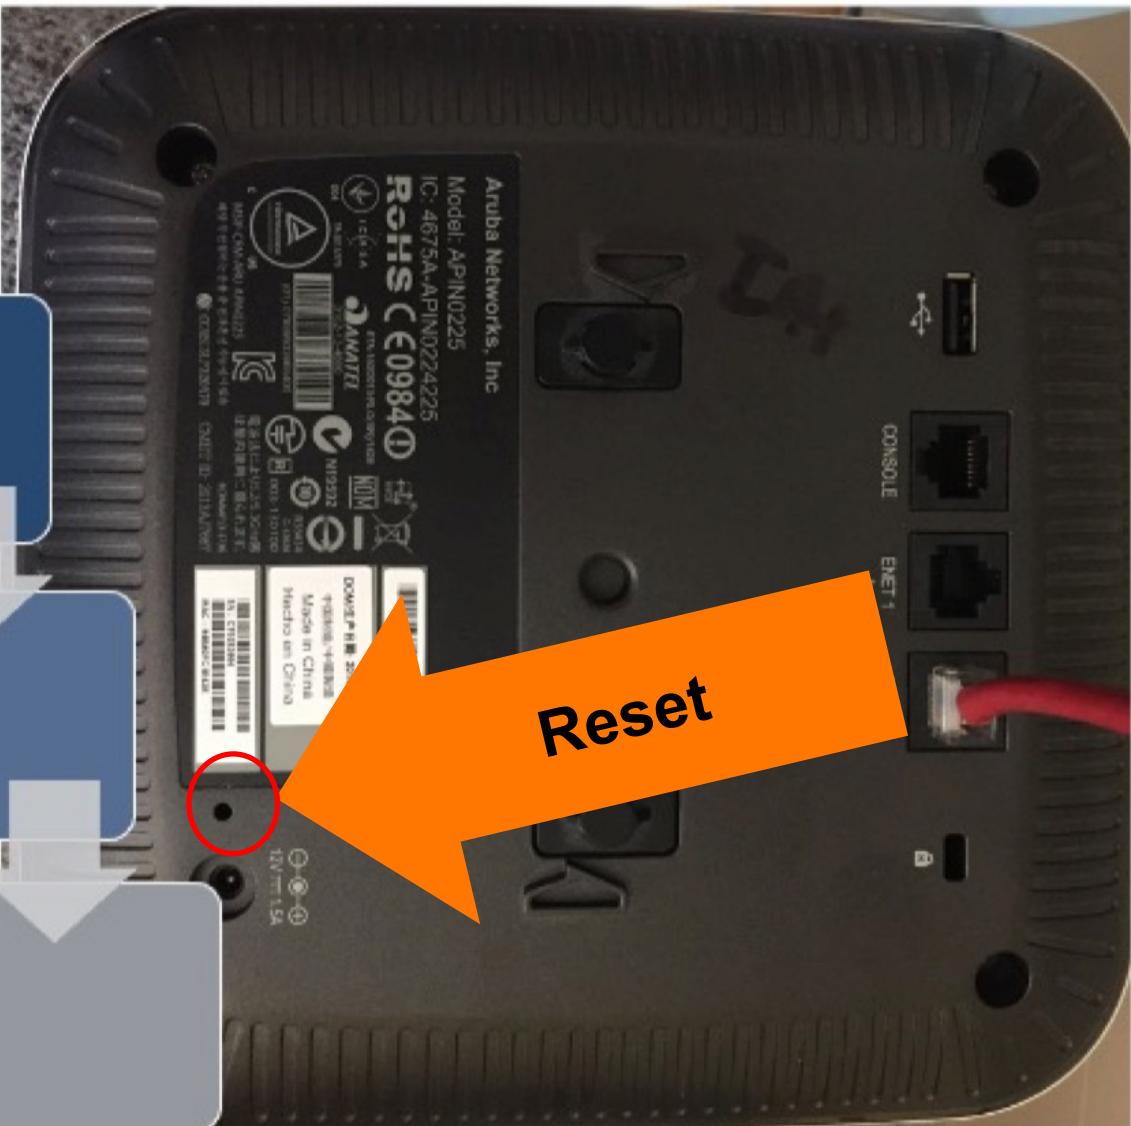

关闭电源

2. Press and hold Reset (use a paperclip) 按住Reset按钮

3. Power on IAP without releasing Reset (Power LED flashes within 5 seconds)
AP加电，持续按住

4. Release Reset (IAP reboots with factory defaults)

待电源灯快闪后松开

Standalone AP

Single AP

Standalone AP

This feature allows you to deploy an Instant AP as an autonomous Instant AP, which is a separate entity from the existing virtual controller cluster in the Layer 2 domain.

Single AP mode is a new AP deployment mode suitable for Instant deployments with only one AP in a site. This mode is a type of standalone AP deployment with additional security when the AP is directly facing a WAN connection. When configured as a single AP, the AP will not send or receive management frames such as mobility packets, roaming packets, hierarchy beacons through the uplink port.
